

Scenario: Player opens app on device. He selects "Join Team" and the app generates a team symbol for him to use to locate other members. There is a current count shown of team members. When a team is all located together, they are given a clue to find a location on campus. The first team to have all their members located at the goal location gets a point. Then all teams receive a new clue and this continues until a team wins 5 points or players quit the game.
